

Bullhorn will send API and credential information through two separate emails:

- 1) The first will include all integration details **minus** the Client Secret or API Password
- 2) The second will include just the API Password and Client Secret

This method of sending details reduces the risk of interception as the data is only useful if the recipient has both parts. It is also likely to route differently due to being sent at separate times.

If you have any questions on the above, please don't hesitate to reach out to marketplacesupport@bullhorn.com.
