3 reasons to digitize how you collect time in clerical & light industrial

When it comes to light industrial work, the name of the game is efficiency.

The more streamlined your administrative processes are – especially when it comes to time collection – the faster workers can get paid, leading to an easier, headache-free experience for everyone. And the easiest way to streamline your time collection process is by going digital.

*Don't take our word for it: **research shows that light industrial workers want to submit their time digitally.***

55% of light industrial workers want to submit their time via a mobile device.

Improving the time submission experience for workers can yield a **44%** increase in worker satisfaction

On-time payments increase worker loyalty by **48%**.

Here are three reasons why you should go digital with time collection.

1

Reduce errors and improve time capture accuracy

Say goodbye to the days of deciphering scribbled timesheets. By implementing a time clock or mobile time solution, you empower workers with real-time feedback, ensuring accurate time capture.

The reduction in handwritten records not only minimizes errors in billing but also fosters trust with your workers. Accurate timekeeping ensures fair compensation, boosting employee satisfaction and loyalty to your worksite.

2

Stop chasing workers for timesheets

Gone are the days of chasing down elusive timesheets. With digital time collection, workers can effortlessly submit their hours either at a clock onsite or directly from their smartphones. This eliminates the need for weekly paper timesheets, allowing employees to log their time daily with ease.

Light Industrial

By streamlining the time submission process, employees are more likely to report their hours promptly without the burden of recalling past workdays on a frenzied Friday afternoon. Whether through mobile time submission or onsite time clocks, digitizing time collection offers a seamless solution to ensure accurate and timely data capture.

3

Store timesheets digitally and reduce your paperwork

Embrace the digital era by storing timesheets securely online. Digital storage not only enhances data safety but also provides a convenient repository for historical worker information. In case of queries or issues, accessing past records becomes effortless, facilitating smooth operations within your staffing firm.

Furthermore, digital tools can assist in capturing meal and rest break information, promoting compliance and mitigating potential legal complications. Tools that prompt workers to record breaks ensure adherence to regulations, safeguarding your business from penalties.

What time collection method should I use?

Only you can decide which time collection method is best for your firm, based on your size, location, and your stage of the digital transformation journey.

Here are a few methods our customers have found success with:

Web time entry, which is accessible from any phone, tablet, or desktop, anytime, anywhere	Physical clocks provided for you to place onsite	The BTE Mobile Punch application, which creates a geofence-capable timeclock right on the candidate's mobile device

By digitizing your time collection processes, you not only boost efficiency and accuracy but also elevate data security and compliance within your organization. It's time to leverage technology to transform your operations and pave the way for enhanced productivity and growth.
